Stop Scooting with Confidence

Developed as a truly vet-exclusive line to offer a comprehensive solution to anal gland dysfunction, **Glandex[®] Max Vet Strength** integrates balanced fiber, Zeolite, targeted probiotics and prebiotics, digestive enzymes, and anti-inflammatory support into a single multimodal formula.

This advanced profile delivers the firm stools, microbiome stability, and perianal comfort needed for chronic, severe, or refractory cases.

1748 W Jefferson Ave, Unit 160, Naperville IL, 60540
usvetcare@vetnique.com • 866.352.6401 • vetnique.com | For veterinary use only

*Excludes probiotic products. **Based on a survey recording the product recommended most often in the Anal Gland Health Products category.

Ideal Usage

Ideal for daily use in veterinary settings for dogs with chronic, severe, or refractory anal gland dysfunction exhibiting:

- ✓ Soft or inconsistent stools
- ✓ Scooting or incomplete natural gland emptying
- ✓ Perianal irritation or inflammation
- ✓ Excess gas, bloating, or GI discomfort
- ✓ Microbiome disruption (e.g., post-antibiotics, illness, diet change)
- ✓ Recurrent gland impaction
- ✓ Mild chronic enteropathies needing stool support
- ✓ Young dogs >12 weeks with early stool or gland concerns

Core Benefits

- ✓ **Firms and bulks** stools for natural anal gland emptying
- ✓ **Supports balanced gut flora** and digestive resilience
- ✓ **Reduces perianal irritation and scooting** to promote comfort
- ✓ **Helps decrease gas, bloating, and GI discomfort**
- ✓ **Provides multimodal digestive support** for consistent stool quality

How Glandex Max Vet Strength Anal Gland Health Chews Work

MegaFiber MAX™ (Soluble + Insoluble Fiber Blend)

Provides an optimized balanced ratio of soluble and insoluble fibers that absorb water, add bulk, and create firm, well-formed stools. Bulkier stools generate natural pressure during defecation, supporting healthy anal gland emptying.

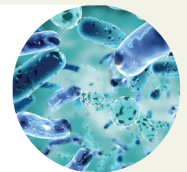

Zeolite® (Clinoptilolite)

Microporous mineral that binds toxins and intestinal gases to reduce GI irritation, help regulate pH, and minimize bloating and flatulence, improving overall digestive comfort.

Maxfivex™ Probiotic Blend

Multi-strain blend restores microbial balance, strengthens the gut barrier, and improves stool quality. Contains Lactobacillus acidophilus (20B CFU/g), Bifidobacterium bifidum (100B CFU/g), Lactospore® (100B spores/g), Lactobacillus rhamnosus (100B CFU/g), and Bifidobacterium animalis (100B CFU/g) to support immunity and normalize gut flora after stress, antibiotics, or dysbiosis.

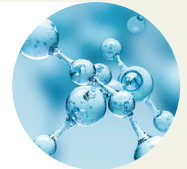

Prebiotics: Actigen® + FOS

Targeted substrates for beneficial bacteria, enhancing probiotic survival and activity. This helps stabilize GI microflora, improve stool consistency, and support long-term digestive resilience.

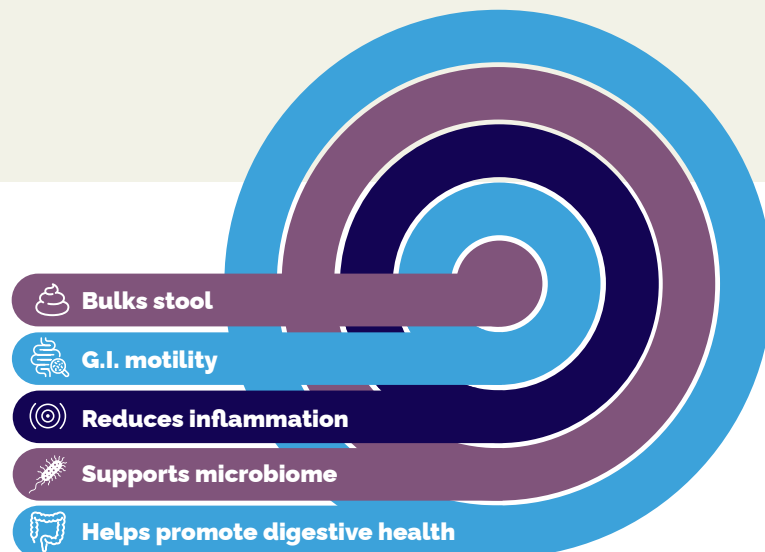

DigeSEB Super Pet® Enzyme Blend

Provides broad-spectrum digestive enzymes that break down proteins, carbohydrates, fats, and fiber more efficiently. Improved nutrient absorption reduces undigested material in the colon, supporting normal stool formation and reducing GI burden.

Bromelain + Quercetin

Natural anti-inflammatory agents that help calm irritated tissues, reduce perianal inflammation, and improve comfort. Their synergistic antioxidant effects support tissue recovery and help reduce scooting.

Multi-Pathway Support

Together, these ingredients support the entire digestive process, from microbiome balance and nutrient absorption to stool formation and inflammation control.

Results in the **first week**

Improvement to the stool consistency/bulk.

Less scooting and increased perianal comfort.

Best used in conjunction with the **Glandex Max Veterinary Strength Anal Gland Spray** for ongoing supportive care.

Size of your dog	Daily Amount
Dogs under 15 lbs	1 small dog chew
Dogs 15-25 lbs	2 small dog chews
Dogs 26-50 lbs	2 medium dog chews
Dogs 51-75 lbs	2 large dog chews
Dogs over 75 lbs	3 large dog chews

Dosing & Use

Give once daily with food, starting with a ½ dose for the first 5-7 days to allow the gut to adjust. Optimal results are best seen when given daily with consistent nutrition and adequate hydration.

Precautions

Use caution in patients receiving anticoagulant therapy, as bromelain and quercetin may potentiate bleeding. Zeolite may bind certain oral medications or minerals; administer 2-3 hours apart. Not recommended for puppies under 12 weeks or pregnant/lactating dogs, due to lack of safety data. Monitor for fiber-responsive constipation; adjust dose and ensure adequate hydration.
